

Xinyang Han

hanxinyang@berkeley.edu | Website | Scholar | GitHub | LinkedIn | 📍 Berkeley, CA

Education

University of California, Berkeley | BAIR

PhD Student in Artificial Intelligence

GPA: **4.00** / 4.00

Berkeley, CA

Sep. 2024 – Present.

Research Experience

Agents' Last Exam (ALE)

Co-leading Berkeley RDI's living benchmark of long-horizon professional workflows, with artifact-level verification across shell, files, web, and GUI environments.

Now spans **1,500+ tasks** across **55 sub-industries**, developed with **300+ experts**; OpenAI reports GPT-5.6 results on ALE to evaluate long-horizon professional work.

JobBench: Aligning Agent Work With Human Will

Co-authored an evaluation of workflows professionals want delegated to agents rather than selecting work only by economic value; each task is a workspace of heterogeneous, sometimes contradictory reference files.

Covers **130 tasks** in **35 occupations**, grounded in ratings from **1,500+ professionals**.

Fact-anchored rubric chains average **35.6 binary criteria/task** across **36 models**, with the strongest system reaching only **45.9%**.

MLS-Bench: Can AI Systems Build Better AI?

Co-authored a benchmark where agents improve a targeted machine-learning component and must demonstrate generalization across controlled settings and scales.

Across **140 open-ended tasks** in **12 domains**, test-time scaling and context experiments show tuning is easier than method invention, while more search, compute, or context alone does not remove the scientific-insight bottleneck.

Multimodal Systems: Sparse-View 3D & Universal Segmentation

SAP3D reconstructs 3D objects from sparse, unposed images and received a **CVPR 2024 Highlight**; U2Seg unifies unsupervised instance, semantic, and panoptic segmentation.

These projects study how systems recover structure from sparse evidence and learn visual representations without task-specific labels, extending the research profile beyond text-only agents.

Clinical AI for Cancer Diagnosis

Developing multimodal clinical workflows for cancer diagnosis with clinical collaborators.

Collaborating with Harvard Medical School and UCSF physicians on high-stakes decision support and clinically grounded evaluation.

Open Source

MassGen: Multi-Agent Scaling System

Contributor

Contributing to an open-source system for collaboration among frontier models and agents.

Leadership & Service

Founder, AI Investment Summit 2025 @ UC Berkeley

Founded Berkeley's largest student-led AI conference with **1,000+ attendees**; led a **100+ person team** and assembled speakers from UC Berkeley, Sequoia Capital, OpenAI, xAI, Google DeepMind, and NVIDIA.

Research community Organizer, Workshop on Agent Behavior at COLM 2026; Communications Chair, CHIL 2026; Logistics Chair, CHIL 2025.

Reviewer ICLR, NeurIPS, KDD, and CHIL (2025).

Invited talk *3D Foundation Models for Generation and Reconstruction*, ICT Turing Class, July 2024.

Technical Skills

Evaluation systems	computer-use environments, long-horizon workflows, task and rubric design, artifact-based grading, model and harness experiments
Languages / frameworks	Python, C++, PyTorch, JAX, TensorFlow
Multimodal	representation learning, computer vision, sparse-view 3D reconstruction, universal segmentation
